DESCRIPTORS	*Directories; *Educational Programs; *Vocational Education
IDENTIFIERS	California (Alameda County); *California (Area V); California (Contra Costa County)

ABSTRACT

The document presents a directory of vocationally oriented educational programs which already exist in Alameda and Contra Costa Counties, California. It is hoped that the inventory will permit improved planning for future programs and greater utilization and coordination of present ones. Listings include: Directory of Educational Agencies, with program information on address, telephone, accreditation and approval, financial aid, handicapped and disadvantaged, placement, admission requirements, and follow up; Programs by Sponsor, with programs listed alphabetically by sponsoring institution and including the United States Office of Education (USOE) identification number, followed by the titles of the programs; and Programs and Courses, presenting a clustering of all programs of one type together under the USOE number, with the sponsors listed in alphabetical sequence within the cluster, followed by program information regarding skill level, length of program, instructional methodology, student enrollments and completions, tuition and other costs, documents awarded and data date. Introductions to each section of the directory provide necessary information for their use, and implications for further study and the utilization of the inventory through remote terminals is discussed. Alphabetical and numerical indexes of USOE program titles are appended. (LH)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

ACKNOWLEDGEMENTS

The development of a report such as this is dependent upon the cooperation and assistance of a large number of individuals and agencies. Although it is not possible to recognize the contribution of each of these, it is only proper that certain individuals and agencies be mentioned.

First, let it be firmly acknowledged that implementation of the Area Vocational Planning concept was made possible because of the decision by the State Board of Education to fund the program through the use of Vocational Education Act money. This report is a product of the Area V Vocational Planning Committee, one of the five committees extablished under the program.

It is appropriate to take this opportunity to recognize the contribution of the members of the Area V Vocational Planning Committee, some of whom have served on the Committee since its inception. As non salaried representatives of the community to the Committee, they have given generously of their time and devotion for the cause of vocational education. It was they who provided the impetus that ultimately made this document a reality.

The format of the report is adapted in part from a number of local
and national reports of a s

INVENTORY OF VOCATIONAL EDUCATION PROGRAMS

INTRODUCTION

The Area V Vocational Planning Committee was given as part of its responsibility, the planning for vocational education on an area basis. (Alameda and Contra Costa counties in California). The charge implied that decisions would be made as to desirable and feasible objectives and as to the most appropriate means of reaching these objectives. In its study of the planning function in vocational education, the Committee became painfully aware that much of the needed information was, for all practical purposes, not available to the planners or when available, proved to be unreliable and useless.

Strangely, even the basic information about programs currently being offered was difficult to acquire. It is true that the names of programs were generally available on offerings in private and public schools and colleges but the needed in-depth information on opportunities for training in a specific occupation required individual study of brochures and catalogues from a number of schools and colleges. Such information was difficult to acquire, to organize and to summarize as a basis for decision making either by educational administrators or by potential students.

s.

From its study, the Committee was assured that there was a crucial need for a system to provide information, not only to potential students or to vocational administrators, but to others about the length of the programs, the instructional content, enrollments and completions. Further, it was essential that the data in the system be easily modified and updated and that it include these kinds of information for public, proprietary and non-profit schools and colleges. The system should include information on vocationally oriented programs at the high school, the the community college and adult levels.

The Committee therefore chose as one of its major priorities for action, the development of such a system.

Purpose

The purpose of the system is to provide to educational administrators, both public and private, an overview of vocationally oriented educational programs which already exist and which will permit improved planning for other needed programs or for greater utilization and coordination of present programs.

Secondly, the system is to permit potential students to evaluate educational opportunities in terms of their own particular interests and resources, and to compare programs in terms of their location, length, cost and content.

It will also demonstrate the need for and feasibility of providing these kinds of information to the users on a continuing basis through the joint effort of the agencies involved.

Operational Definition of Vocational Education

There are several different interpretations of the term vocational education. The term may be used as inclusive of the terms professional education and technical education but it is also commonly used as exclusive of, and as an alternative to, each of these. Similarly, it has been used in a manner to include or to exclude manpower training programs offered under the Department of Labor.

The willingness of a sponsor to identify his programs as vocational education may largely depend upon the manner in which the program is financed. Some sponsors prefer to identify with the term vocational, whereas others may be seeking greater status or more effective communication as to the purpose of their instruction through the use of other terminology.

Whereas the administrators of a program are typically the ones who decide whether

the ones who decide whether

it is to be vocationally oriented, the students may or may not intend to use the instruction as preparation for employment. Similarly, students may prepare for employment through study in programs which have not been designed by the sponsors for that purpose.

This report includes the public education sponsored, Department of Labor sponsored, private non-profit and proprietary education programs at the secondary, the community college and the adult levels which have as their objective the preparation of people for employment in a specific occupation or cluster of closely related occupations.

PROCEDURE

As mentioned above, the Area V Vocational Planning Committee became aware of the need for an educational information system to serve administrators of vocational education and manpower training programs in their planning efforts and to fill a similar need by individuals for information in career planning. After accepting this problem as a priority for action, we found it necessary to define more specifically the information needs and devise a plan for meeting these needs.

Committee members and staff studied a number of brochures, catalogues, and listings of programs from within and outside of the State, and developed listings of kinds of information which would be of value to the potential students and which had apparent high value to the administrators. After interviewing a number of vocational education administrators and guidance personnel, the listings were further refined, combined and a master list was adopted.

Recognizing that guidance and vocational education administrators were usually busy with tasks which demand their urgent attention, the Committee chose to follow procedures which would result in as little disruption of their efforts as possible. The major part of the data was acquired from brochures, district plans and other reports prepared by the administrators for other purposes. The assembled data was then submitted to the administrators for review and verification or supplementation as seemed appropriate. The extent to which it was necessary to acquire supplemental information varied somewhat from sponsor to sponsor as does the completeness of the data acquired.

It was originally intended that the report include estimates of enrollments for the coming year. However, it was found that the estimates available from school and college reports developed for other purposes were not appropriate for this report. Therefore, enrollment figures for public schools and colleges were acquired from reports submitted to state level agencies for the previous year. Enrollment figures for other programs were received directly from the sponsors.

Systematization of Information Retrieval

Part of the difficulty in planning for vocational education is the lack of availability of needed planning

ion of Information Retrieval

difficulty in planning for vo-
cation is the lack of availability of needed planning information. To be more specific, it is not strictly the lack of needed information which is the dominant problem. Rather, it is the lack of a system to handle that planning information which does exist in some form in some place as well as certain information which does not now exist.

Most of the data now available through the Vocational Planning System were already available in some form, in some place, but at too great a cost in terms of time and effort required. Now because the educational data can be organized readily into various combinations, the user can make comparisons between programs which were not formerly practical.

Because of the need to provide this flexiibility with little effort to the user, and to provide for economical revision of the data, it was necessary that the system be computer based. An agreement was made between the Contra Costa County Schools Office, which serves as fiscal office for the Area V Vocational Planning Committee, and GPD Consultants, which is located in Walnut Creek, California, to design a computer based system which would serve as part of the total Vocational Planning System. The GPD Consultants aspect of the System consists of twelve separate computer programs and provides for entry of data into the computer, editing data already in the computer, display of data already entered or in the process of being entered, and print-outs of data. The display and print-outs can be listed according to any sponsor or combination of sponsors and then, within the sponsor cluster, the programs can be listed according to program number. Listings can also be made according to program number sequence and then, within a program number, programs can be listed according to program sponsor. Both procedures are used in this report, the former to provide information as to the offerings provided by a sponsor and the latter to provide a means of comparing a specific program offered by one sponsor with similar programs offered by other sponsors.

Additional computer programs were written or adapted by Contra Costa County Schools personnel and the staff of the Area V Vocational Planning Committee.

Thus information is available on programs, sponsors and educational centers through display or print-out at the computer site or through telephone connected remote terminals.

Since relatively few vocational administrators guidance personnel, and students have such equipment readily available to them, this report will be distributed to each of the high schools and community colleges in Alameda and Contra Costa counties for use in vocational and educational planning. Note of Caution

Although considerable effort was made to acquire and verify the data contained in this report, the programs and descriptive information underlying the data are subject to continual change.

Therefore, rather than using the data as the authority on any program or services, it should be used to provide an overview of all programs and a description of each program which is probably accurate but which should be verified before taking action based upon the data.

Omission of a program a school or a college which might rightfully be included in this report or inaccuracies in the data which have occurred are unintentional and we offer our sincere apology. On the other hand, inclusion of information on a program, school or college is not intended to be construed as an endorsement of the program, school or college, nor is it intended to be a certification of the accuracy of the data provided.

Services and Requirements

Broadly speaking, two types of information are provided in this document, information about the instructional programs and information about the educational centers or sponsors and their services and requirements. This section provides information on the centers and sponsors. In addition to information such as the name, address and telephone number of the instructional centers, several other kinds of information are presented in coded form. The coding system provides information on the approval/accreditation status, financial aids, the appropriateness of facilities for handicapped and disadvantaged, employment service, admission requirements, and the last recorded date of the student follow-up study.

Also included are identification numbers for sponsors and instructional centers which permit users of the computer and/or remote terminals to request additional reports from the data base.

Accreditation and Aproval

Recognition of a school, college or instructional program is often sought from agencies or organizations which have as a major part of their responsibility, the evaluation of educational programs and/or institutions. The listing of information on accreditation and approval status is
not intended to imply that
tion is either necessary or
that the particular program
deration is appropriate to a
particular needs. It is inc
those centers where the info
readily available; it is sub
tinual change and need for v
the user. The key to the co

school, college or in-
ram is often sought from
nizations which have as a
eir responsibility, the
cational programs and/or
he listing of information
and approval status is

not intended to imply that such recognition is either necessary or desirable or that the particular program under consideration is appropriate to a student s own particular needs. It is included only for those centers where the information was readily available; it is subject to continual change and need for verification by the user. The key to the code follows:

Symbol	Accrediting or Approval Body
A	Western Association of Schools and Colleges
B	Western Association of Schools and Colleges (Candidate Status)
C	A California State Board
D	State Department of Education Bureau of School Approvals
F	Accrediting Commission for Business Schools
G	Council on Public Health Education
H	Other

Financial Aids

There are many kinds of financial assistance which may be provided to students. The most common of these are the scholarships, the loans, and part time employment. The variety of such scholarships and loans should be studied thoroughly by the person who will be seeking such assistance. The coding used in this report to identify the kinds of assistance provided is as follows:

Symbol	Type of Financial Aid
J	Loans
K	Part-time employment
L	Scholarships
M	Other financial aids

Disadvantaged and Handicapped

Although it is not practical to provide in one instructional center all of the things that are necessary for students who have educational disadvantages or other handicaps, some schools do make a conscious effort to provide certain kinds of services for such students. However, potential students should assure thenselves that the facilities that are available are appropriate to their own particular needs.

When identified in this report as being available in some form at an instructional center, the meanings of the coded symbols are:

Symbol	Instructio and Facilities
N	Appropriate to the disadvantaged
O	Appropriate to the handicapped

Work Placement Service

The purpose of vocational education is to prepare people for employment or for upgrading people who are already employed. Some educational centers provide a placement service to help their students with acquiring part time employment while enrolled and full time employment upon graduation. When identifi
vided to some extent, the

Symbol	Work Placement Service
P	Part time placement for enrollees
Q	Placement service for graduates

Special Admission Requirements

Whereas many of the vocational education programs accept all or essentially all applicants, a number of programs have rather strict entrance requirements. Some of these are academically based and some have physical and other requirements. The general practice of the educational center in regard to entrance procedures is coded as follows:

Symbol	Special Admission Requirements
S	Admission or placement tests required in all vocational programs
T	Admission or placement tests required in some vocational programs
U	Admission or placement tests recommended in all vocational programs
V	Admission or placement tests recommended in some vocational programs
W	Interview required prior to admission in all vocational programs
X	Interview required prior to admission in some vocational programs
Y	Interview recommended prior to admission in all vocational programs
Z	Interview recommended prior to admission in some vocational programs

Follow-up Studies

One means of evaluating the effectiveness of a program in preparing people for employment is through follow-up studies, that is, studies of previous enrolees and graduates to learn of their present employment status. Many schools and colleges follow this procedure regularly so they can maintain the maximum effectiveness of their program. This report includes the date of the last such study that was reported.

INTRODUCTION TO PROGRAM LISTINGS

The programs which are available in Alameda and Contra Costa Counties are listed in this report in two ways, first, the programs are listed for each sponsor and within the programs of a sponsor, are then listed by the identification number developed by the United States Office of Education. Second, there is a clustering of all of the programs of one type together under the United States Office of Education (U.S.O.E.) number with the sponsors included in numerical sequence within the cluster.

The first listing makes it possible to consider the total offerings of a particular sponsor whereas the latter listing, which also includes comprehensive information about the programs permits a person to compare similar programs at different locations. The feasibility of such comparisons should make articulation between programs more effective and, with appropriate labor market information, should permit more logical evaluati
need for expansion or contra
erings.

To assist in locating progra
tification numbers provided
States Office of Information

To assist in locating programs, the identification numbers provided by the United States Office of Information (supplemented by the State of California) are listed in the appendix. The numerical listing permits location of a specific program title when the number is known, whereas the alphabetical listing permits a person with a program title to locate the program number and program numbers for other programs which are similar.

In the Program by Sponsor listing which follows, the programs are listed according to the sponsor and the United States Office of Education number. The titles which follow the numbers are those given to the program by the sponsor.

The second, more comprehensive listing follows later in the report.

PROGRAM AND COURSE DESCRIPTIONS

The programs are listed in this inventory according to the United States Office of Education numbering system (supplemented in some cases with state defined titles and numbers). The U.S.O.E number and program title are followed on succeeding lines by the name of the program sponsor, (school, district, college or other), the title given to the program by the sponsor (which may be the same or different from the title asigned under the U.S.O E.numbering system) the name(s) of the instructional center(s), and the titles of courses. In general, and particularly with the community colleges, numbers are also assigned to each course within the program.

More recently, the Chancellor's Office of the California Community Colleges and the State Department of Education have devised additional program identification systems Several of the programs are also identified with symbols from these systems.

Apprenticeship training programs which have actually been implemented in the two counties by a school or college district as a co-sponsor are listed under the district involved. In addition, under the classification Vocational Work Experience, the apprenticeable occupations are listed.

Similarly training in military occupations through the United States armed services is listed under Vocational Work Experience.

The description of these kinds of information follows.

Skill Level

The skill and student level terminology has been adapted from descriptors developed by the United States Office of Education. The symbols, the descriptive titles. and the meanings of the symbols are as follows:

Symbol	Name and Description
A	Supportive: Courses or programs which are not intrinsically identified as vocational education but which are offered as a needed supplement to the vocational program.
IS	Introductory-secondary: Courses or programs at the secondary level which are introductory in nature as contrasted to those which are designed to provide entry level competency into an occupation.
IP	Introductory-postsecondary: Courses or programs at the postsecondary level which are introductory in nature as contrasted to those which are designed

to provide entry level competency into an occupation.

S Secondary: Courses or programs at the secondary level which are designed to provide entry level competency in an occupation.

PS Postsecondary: Courses or programs at the postsecondary level which are designed to develop entry level competency in an occupation.

AP Adult Preparatory: Courses or programs provided for adults which are designed to provide entry level competency in an occupation.

AS Adult Supplementary: Courses or programs which are designed to provide increased competency or upgrading to adult students who are already employed.

Length of Program

The length of a program or the period of time it takes to complete a program is a significant factor which must be considered by vocational administrators and potential students alike.

The manner of describing this time period varies somewhat depending upon the type of institution offering the program. Thus, in high schools and community colleges, courses and programs are generally described as being a specific number of quarters or semesters in length. The longer programs may also be described as being one

or more years in length
length may also be desc

Program

of a program or the period of kes to complete a program is a factor which must be considered nal administrators and potential like.

of describing this time period ewhat depending upon the type of offering the program. Thus, in s and community colleges. programs are generally descri- ng a specific number of quarters s in length. The longer pro- lso be described as being one or more years in length. However, the length may also be described in terms of contact hours, that is, the number of hours in which the student is in the laboratory, shop or classroom under instructional supervision.

This program listing includes information on length of program under two headings, Months" and "Hours" The Month column describes the program in terms of months to completion whereas the Hours column describes the program in terms of credit hours, or contact hours, or units of credit depending upon the procedure used by that particular school or college.

Instructional Methodology

Depending upon the objectives of the program, the resources which can be made available for the instructional program, and the achievement level and aptitudes of the students, the instructional procedures may vary from one school (or college) to another for programs which appear to have very similar objectives. Under "Methodology" are coded several of the more common instructional descriptors. The key to the coding is as follows:

Symbol	Title and Description
A	Open Entry Open Exit. A program or course which permits students to enroll throughout the year and to terminate as soon as the work has been completed.
B	Correspondence. A program or course

provided off campus through correspondence.

C Lecture. A Program or course which provides a significant part of the instruction through lectures.

D Laboratory or Shop A program or course which provides a significant part of the learning experience through laboratory or shop activities

E On the Job. A program or course which provides a significant part of the learning activity through actual participation in a job.

F Audio Visual. A program or course which is largely oriented toward providing its learning experience through audio-visual presentations.

G Learning Activity Packages. A program or course which makes use of an organized set of materials to provide a specific unit of instruction.

H Peer Instruction. A program or course which uses peer tutoring and/or instruction to provide a significant part of the learning experience.

I Individualized Study. A program or course which helps students to progress at their own pace through individualized learning experiences.

zed learning experiences.

Student Enrollments and Completions

The Enrollment/Completions column includes estimates of total (body count) enrollments in the program for the previous year. These figures were acquired from public records for high school, Regional Occupational Program and Center, and community college programs and directly from the sponsors of other programs. At times a figure listed for a program within a district may actually be the total enrollment for that program for the entire district. To the extent that the figures become critical for one s planning, it is recommended that the school or college be contacted.

Costs

The costs to the students are listed. first in terms of the tuition type costs and secondly, the costs attributable to books, supplies, special uniforms, etc.

The regularly scheduled programs of the public community colleges and schools are tuition free to the residents of the district but tuition may be charged for adult programs and to non-residents of the district.

Although the data included in this report is intended to be accurate and informative, tuition and costs are continually changing and some of the figures may allready be out of date. It is essential that all such information be verified with the particular school or college concerned during the early stages of one's educational planning

Documents Awarded

Most schools and colleges are authorized to grant certain documents upon successful completion of a program by a student. The actual document granted may vary from school to school and from college to college. The most common types of these are the diploma, the certificate and the degree. Information as to the kind of document if any, awarded to the student is provided in the column titled Award. The meaning of the symbols is as follows:

Symbol	Document
AA	Associate in Arts Degree
C	Certificate
CA	Certificate of Achievement
CC	Certificate of Completion
D	Diploma
DH	Vocational program included as part of high school diploma program

Revision of Data.

Following the information on program award, is the Data Date column which lists the year in which the information was originally entered or last revised. Although the date provides a clue as to the recency of the data, it must be emphasized that the assembling of large amounts of data from a number of different sources almost assures some inaccuracy. All information about any specific school or college should be verified with the institution before enrollment or payment of any tuition or fees.

IMPLICATIONS FOR FURTHER STUDY

The Vocational Planning System was designed to provide information on vocational education to administrators and to potential students. However, with relatively little effort the system could also be utilized to provide similar information on other courses and programs.

With modification, it could be used for maintaining and revising information for annual and other reports required from vocational and other administrators.

The information contained w
tem could be processed, by
other formats and could pro
graphic presentations of pr
butions either mapped geogr
through tabular form.

Further development of the
dependent upon favorable re
users of the information an
of cooperative effort and s
continuation.

IMPLICATIONS FOR FURTHER STUDY

Planning System was design-
nformation on vocational
ninistrators and to poten-
However, with relatively
he system could also be
vide similar information
s and programs.

on, it could be used for
revising information for
reports required from vo-
her administrators.

The information contained within the system could be processed, by computer, into other formats and could provide on call, graphic presentations of program distributions either mapped geographically or through tabular form.

Further development of the system will be dependent upon favorable response by the users of the information and development of cooperative effort and support for its continuation.

UTILIZATION OF THE SYSTEM THROUGH REMOTE TERMINALS

As mentioned earlier in this report, the vocational planning system was designed to provide information on vocational education programs through on-site use of a computer or through remote access to the computer via telephone linked terminals. The procedures to be used in l the computer have not been this report. However, inf the procedures and the pro be obtained from the Offic Contra Costa County Superi Schools.

UTILIZATION OF THE SYSTEM THROUGH REMOTE TERMINALS

rlier in this report, the
ning system was designed to
tion on vocational education
h on-site use of a computer
te access to the computer
inked terminals. The procedures to be used in linking up with the computer have not been described in this report. However, information on the procedures and the programming can be obtained from the Office of the Contra Costa County Superintendent of Schools.
